

Mini Lesson Worksheet

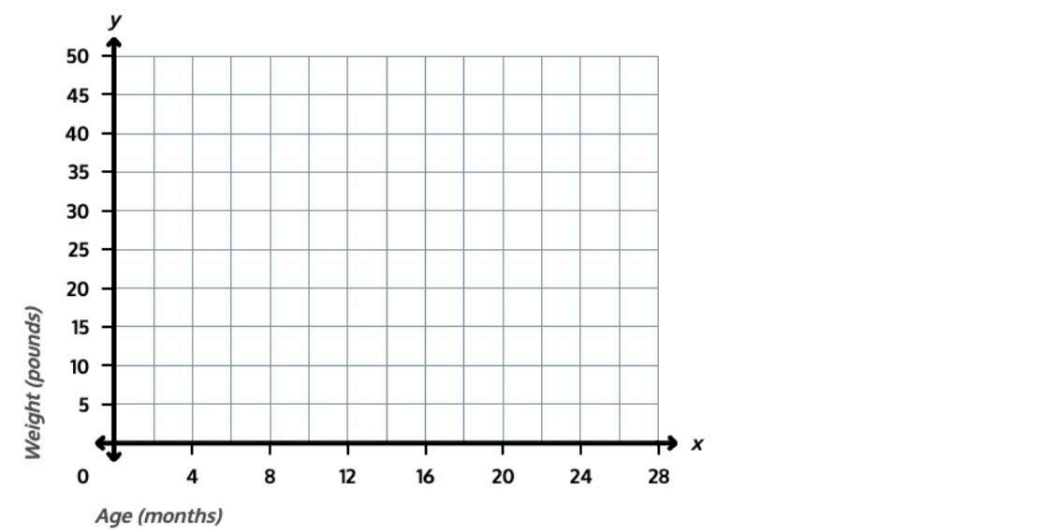

Name _____

1. The table below shows Biscuit the dog's weight at different ages.

Age (months)	Weight (pounds)
0	3
4	15
8	25
12	35
16	40
20	45
24	45
28	45

`{ "type": "table", "rows": [[{ "Age (months)": "0", "Weight (pounds)": "3" }, { "Age (months)": "4", "Weight (pounds)": "15" }, { "Age (months)": "8", "Weight (pounds)": "25" }, { "Age (months)": "12", "Weight (pounds)": "35" }, { "Age (months)": "16", "Weight (pounds)": "40" }, { "Age (months)": "20", "Weight (pounds)": "45" }, { "Age (months)": "24", "Weight (pounds)": "45" }, { "Age (months)": "28", "Weight (pounds)": "45" }]] }`

Plot each data point on the coordinate plane below. Then, connect the points with line segments to make a line graph.

`{ "type": "coordinatePlane", "minX": 0, "maxX": 28, "minY": 0, "maxY": 50, "gridDimensions": [ 14, 10 ], "planeSize": "large", "xAxisLabel": "Age (months)", "yAxisLabel": "Weight (pounds)", "autoTickLabelIntervals": [ 2, 1 ], "points": [] }`

2. Use the line graph of Biscuit's weight to answer the following questions.

- a. How much weight did Biscuit gain in the first 4 months of his life, between 0 months and 4 months?
- b. How much weight did Biscuit gain in the second 4 months of his life, between 4 months and 8 months?
- c. How much more weight did Biscuit gain in the first 4 months than in the second 4 months?

3. Use the line graph of Biscuit's weight to answer the following questions.

- a. During which 4-month period did Biscuit gain weight the fastest? How can you tell from the graph?
- b. What happened to Biscuit's weight between the ages of 20 months and 28 months? How does the line graph show this?
