

Mini Lesson Student Materials

Name: _____

1. The table shows how much Cami weighed at each 4-month period. Plot each point on the coordinate plane, then connect the points with line segments to make a line graph.

Age (months)	Weight (pounds)
--------------	-----------------

0	5
4	20
8	30
12	40
16	45
20	50
24	50
28	50

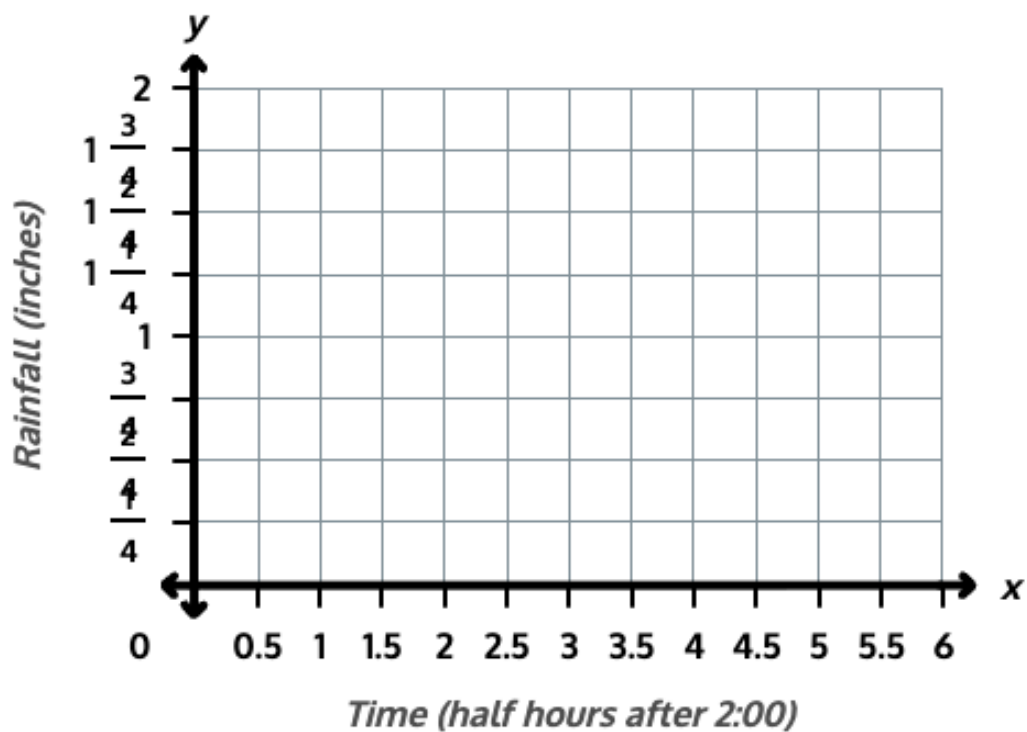

2. Use Cami's weight graph from Problem 1 to answer each question.

- How much weight did Cami gain in the first 4 months of her life?
- How much weight did Cami gain between 4 months and 8 months?
- Did Cami gain more weight in the first 4 months or the second 4 months? How does the line graph show this?

3. The table shows the total rainfall measured each half hour during a storm. Plot each point on the coordinate plane and connect them with line segments. Then answer the questions.

Time Total Rainfall (inches)

2:00	0
2:30	$\frac{1}{4}$
3:00	$\frac{3}{4}$
3:30	1
4:00	1
4:30	1
5:00	$1\frac{3}{4}$

- During which half hour did the most rain fall? How can you tell from the graph?
- What happened to the total rainfall between 3:30 and 4:30? How does the graph show this?
