

Mini Lesson Student Materials

Name: _____

1. The histogram shows the weights, in pounds, of dogs at a dog park. Each bar includes the left-end value but not the right-end value. For example, the first bar includes dogs that weigh 10 pounds and 15 pounds, but not 20 pounds.

- How many dogs weigh at least 30 pounds?
- How many dogs weigh exactly 25 pounds?
- What is a typical weight for a dog at this park?

2. The frequency table shows the heights, in inches, of plants in a garden. Use the table to create a histogram on the grid.

Height (inches) Frequency

0–5	3
5–10	7
10–15	12
15–20	5
20–25	2

3. Both displays show the same data set: the number of minutes 20 students spent reading last night.

- Which display tells you how many students read for exactly 20 minutes? How many?
- Which display makes it easier to see the overall shape of the data?
- Which display would you use to find how many students read for at least 30 minutes? How many?
