

Mini Lesson Sample Script

1. Identify the defining attributes of a triangle by counting straight sides and pointy corners.

Look at this shape. How many straight sides does it have? How many pointy corners does it have?

Answer: 3 straight sides; 3 pointy corners. This shape is a triangle.

T: Look at this shape with me. I'm going to point to one edge. This is called a side. A side is one straight edge of the shape. Let's count the straight sides together. Touch each one as we count.

S: 1, 2, 3.

T: How many straight sides?

S: 3 straight sides.

T: Now let's count the pointy corners. Touch each pointy corner.

S: 1, 2, 3.

T: How many pointy corners?

S: 3 pointy corners.

T: This shape is called a triangle. A triangle has 3 straight sides and 3 pointy corners. Whisper triangle with me.

S: Triangle.

2. Determine whether shapes are triangles by checking for three straight sides, three corners, and a closed figure.

Is this shape a triangle?

T: Here is a new shape. Count the straight sides.

S: 1, 2, 3.

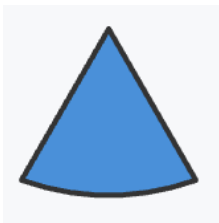

T: Count the pointy corners.

S: 1, 2, 3.

T: Is it closed?

S: Yes.

Is this shape a triangle?

T: Is this shape a triangle?

S: Yes! It has 3 straight sides and 3 pointy corners, and it's closed.

Is this shape a triangle?

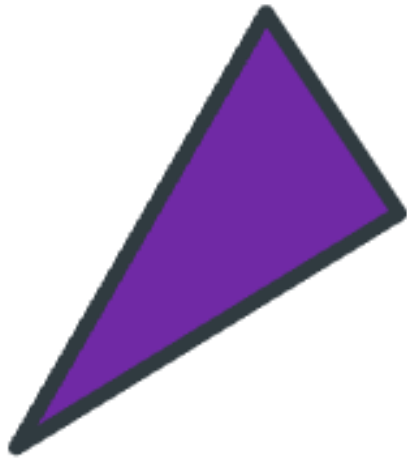

T: It looks different from the first triangle, but it's still a triangle. Now look at this shape. Is it a triangle?

(Show this last shape with a small gap at one corner so it is open.)<i>Answer: Yes, it is a triangle (3 straight sides, 3 pointy corners, closed); No, it is not a triangle (it has a curved side); No, it is not a triangle (it is open).</i>	S: It has 3 corners, but this side is not straight. It curves. T: So is it a triangle? S: No. A triangle has 3 straight sides. That side is curved. T: Here is one more shape. Count the sides. S: 1, 2, 3. T: Count the corners. S: 1, 2, 3. T: Imagine a pet was inside this shape, like a little fence. Could the pet escape? S: Yes, there's a gap right here! T: That means the shape is open, not closed. Is it a triangle? S: No. Triangles have to be closed.
3. Circle the triangles and cross out the shapes that are not triangles.	
Look at the four shapes on your worksheet. Circle the triangles. Cross out the shapes that are not triangles.	T: Look at the shapes on your worksheet. Check each one. Does it have 3 straight sides, 3 pointy

corners, and is it closed? Circle the triangles.
Cross out the shapes that are not triangles.

S: (Work.)

Answer: Circle the wide triangle and the rotated triangle. Cross out the square and the curved shape.
